Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

DETAILED ACTION

Allowable Subject Matter

1. Claims 1-45 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Prior art fails to disclose or suggest, in combination with the claimed subject matter;
Claims 1-18:

a multi-phased DC/DC converter a multi-phase DC/DC converter comprising a plurality of pulse width modulators, a plurality of control circuit channels each having means for generating channel current signals, means for generating a differential channel current which is derived from a comparison of the current signal and an average of the current signals, means for generating a differential error signal which is derived from a comparison of an error signal, representative of a comparison of the output voltage and a reference, and the differential channel current signal. The pulse width modulators compare the differential signal and a ramp signal to drive synchronous rectified buck circuits.

Claims 19-21, 37-40:

a method of balancing a plurality of channel currents by averaging the channel currents to determine one or more average channel current signals; comparing the output voltage to a reference to determine a common error signal and controlling each channel current based at least in part on the average channel current signals, one of the plurality of channel currents, a second reference signal and the common error signal.

Claims 22-27:

a control circuit for a multi-phase DC/DC converter comprising an averaging circuit for averaging channel currents to determine one or more average channel current signals; an error amplifier responsive to the output voltage and a reference signal to provide a common error signal; a plurality of pulse width modulators responsive to the common error signal, the one or more average channel current, one of the plurality of channel current signals, and a second reference signal.

Claims 28-40, 42 and 45:

a multi-phase DC/DC converter circuit having a control circuit to provide pulse width modulated signals to a plurality of channels, wherein the control circuit is coupled to receive channel current signals and has a scaling circuit to produce one or more scaled values based on the channel currents, an error amplifier providing a common error signal based on the output voltage and a reference; a plurality of pulse width

Art Unit: 2838

modulators responsive to the common error signal, the one or more scaled values, one of the plurality of channel currents, and a second reference.

Claim 41:

a method of balancing current from a plurality of channels in a multi-phase DC/DC converter, wherein an error signal is generated based on the output voltage and a reference; generating individual modification signals for each of the plurality of channels from modifying an effect of the error signal, each individual modification signal based at least in part on a signal representative of a channel current for that channel, one or more signals representative of a scaled sum of the channel currents and applying the error signal and individual modification signals to a plurality of pulse width modulators for controlling the channel currents.

Claims 43 and 44:

a method of balancing current from a plurality of channels in a multi-phase DC/DC converter, wherein adding a plurality of channel currents to obtain a cumulative current signal, producing one or more signals that are a function of the cumulative current signal, comparing the output voltage with a reference to produce a common error signal and control each channel current based at least in part on the one or more signals that are a function of the cumulative current signal, one of the plurality of channel current signals, a second reference and the common error signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
